# S181－Odd is Odd 

Percy Wong \｛percywtc\}

## S181 - Odd is Odd

## The Problem

Need C secs to move one to its left.
Need D secs to move one to its right.

## SUBTASKS

## SUBTASKS

For all cases：
$2 \leq N \leq 10^{5}$
$0 \leq A_{i} \leq 18$
$1 \leq C, D \leq 10^{4}$

## Points Constraints

$14 \quad N=3$
216 Exactly two integers in $A_{i}$ are odd．
313 All $A_{i}$ are odd．
$4242 \leq N \leq 1000$
533 No additional constraints．

## Solution 1 －The First Subtask

14 points for just handling $\mathbf{N}=\mathbf{3}$
We can notice that it is impossible only when there are $\mathbf{1}$ or $\mathbf{3}$ odd numbers
If there are no odd numbers，the answer is simply $\mathbf{0}$
Otherwise，the 2 odd numbers must be sitting next to each other， Therefore the answer must be $\boldsymbol{\operatorname { m i n }}(\mathbf{C}, \mathbf{D})$

## Solution 1 - The First Subtask

## This solution can only solve Subtask 1, nothing else :)

| Subtask | Score | Max Score |
| :---: | :---: | :---: |
| 1 | 14 | 14 |
| 2 | 0 | 16 |
| 3 | 0 | 13 |
| 4 | 0 | 24 |
| 5 | 0 | 33 |
| Total | $\mathbf{1 4}$ | $\mathbf{1 0 0}$ |

## Solution 1 －The First Subtask

## PSEUDOCODE

```
ReadLine(N, C, D)
ReadLine(x, y, z)
If ((x + y + z) % 2 = 0)
    PrintLine(-1)
Else
    If (x % 2 = 1 OR y % 2 = 1)
        PrintLine(Min(C, D))
    Else
        PrintLine(0)
```

香港電腦奧林匹克競賽

## Solution 2 －The Second Subtask

16 points for just handling exactly $\mathbf{2}$ odd numbers
It is easy to see that the optimal solution must be moving one nugget from one person to the other
Here，we must use the shorter distance between them， And the direction based on which is smaller between $\mathbf{C}$ and $\mathbf{D}$

Therefore，the answer is mindist＊ $\boldsymbol{\operatorname { m i n }}(\mathbf{C}, \mathrm{D})$

## Solution 2 －The Second Subtask

## This solution can only solve Subtask 2，nothing else ：）

香港電腦奧林匹克競賽
Hong Kong Olympiad in Informatics

| Subtask | Score | Max Score |
| :---: | :---: | :---: |
| 1 | 0 | 14 |
| 2 | 16 | 16 |
| 3 | 0 | 13 |
| 4 | 0 | 24 |
| 5 | 0 | 33 |
| Total | $\mathbf{1 6}$ | $\mathbf{1 0 0}$ |

## Solution 2 －The Second Subtask

## PSEUDOCODE

```
ReadLine(N, C, D)
For i = 1 .. N
    Read(x)
    If (x % 2 = 1)
        If (PosA = NULL)
        PosA = i
        Else
    PosB = i
PrintLine(Min(PosB - PosA, N - PosB + PosA) * Min(C, D))
```

## Solution 3 －The Third Subtask

13 points for just handling all odd numbers
When $\mathbf{N}$ is odd，meaning that it is impossible
When $\mathbf{N}$ is even，everyone having odd number of nuggets， We can just pair up them with their neighbours，and then move one to other Therefore，the answer will be（N／2）＊Min（C，D）

香港電腦奧林匹克競賽
Hong Kong Olympiad in Informatics

## Solution 3 －The Third Subtask

## This solution can only solve Subtask 3，nothing else ：）

香港電腦奧林匹克競賽
Hong Kong Olympiad in Informatics

| Subtask | Score | Max Score |
| :---: | :---: | :---: |
| 1 | 0 | 14 |
| 2 | 0 | 16 |
| 3 | 13 | 13 |
| 4 | 0 | 24 |
| 5 | 0 | 33 |
| Total | $\mathbf{1 3}$ | $\mathbf{1 0 0}$ |
|  |  |  |

## Solution 3 －The Third Subtask

## PSEUDOCODE

```
ReadLine(N, C, D)
If (N % 2 = 0)
    PrintLine((N / 2) * Min(C, D))
Else
    PrintLine(-1)
```

## Solutions Summary

| Solutions |  | 1－1 ${ }^{\text {st }}$ Sub | 2－2 ${ }^{\text {nd }}$ Sub | 3－3 ${ }^{\text {rd }}$ Sub |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Subtask | Max Score | Score |  |  | Score |
| 1 | 14 | 14 | 0 | 0 | 14 |
| 2 | 16 | 0 | 16 | 0 | 16 |
| 3 | 13 | 0 | 0 | 13 | 13 |
| 4 | 24 | 0 | 0 | 0 | 0 |
| 5 | 33 | 0 | 0 | 0 | 0 |
| Total | 100 | 14 | 16 | 13 | 43 |

## Solution 4 －The Full Solution

First，we can notice that only positions with odd nuggets are important We always want to pass a nugget from one to another

Also，we can notice that the direction is not important， We can simply choose it based on which is minimum between $\mathbf{C}$ and $\mathbf{D}$ So now we know that for two selected position，the cost of moving one to other must be dist＊ $\operatorname{Min}(\mathbf{C}, \mathrm{D})$

## Solution 4 －The Full Solution

If there are＂odd number＂of odd numbers，i．e．sum is odd， The answer is impossible，otherwise，we should pair up them to find solution

## Solution 4 －The Full Solution

Notice that we must find non－overlapping pairing way The optimal solution must be one of the following two：

## Solution 4 －The Full Solution

Here is briefly why we won＇t consider overlapping pairing way

$(a+b)+(b+c)>a+c$

$(a+b+c)+(b)>a+c$

## Solution 4 －The Full Solution

|  | Subtask | Score | Max Score |
| :---: | :---: | :---: | :---: |
