# S212 Super Chat 

Problem idea by Tony Wong<br>Problem set by Wai Ka Hei，Jeremy Chow

30 January， 2021

## S212－Super Chat

## Statistics

| Task | Attempts | Max | Mean | Std Dev | Subtasks |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| S212－Super Chat | 49 | 100 | 30.326 | 36.66 | 16：31 | 15：18 | 18：13 | 27： 10 | 24： 9 |

First solved by dbstoshinari123 at 0：45
9 contestants got 100
Highest mean among senior problems
Easiest problem in senior problem set

## S212－Super Chat

## Task

The Super Chat section can only display at most $\mathbf{3}$ Super Chats at a time
The $\mathbf{3}$ latest pinned Super Chats will be shown
Ordered by purchase time

HK\＄120，HK\＄25，HK\＄1000 are the 3 latest
pinned Super Chats among all

香港電腦奧林匹克競賽
Hong Kong Olympiad in Informatics

## S212－Super Chat

## Task

| Pin duration is determined by the table | Price | Colour | Pin duration and notes |
| :---: | :---: | :---: | :---: |
|  | \＄5－59 | Blue | 0 minutes．No chat message can be entered． |
|  | \＄10－924 | Cyan | 0 minutes |
| Given $\mathbf{N}$ Super Chat sorted by purchase time | \＄25－549 | Green | 2 minutes |
|  | \＄50－599 | Yellow | 5 minutes |
|  | \＄100－5249 | Orange | 10 minutes |
| Find the number of seconds that each | \＄250－5499 | Magenta | 30 minutes |
|  | \＄500－5999 | Red | 1 hour |
| Super Chat is visible | \＄1000－51499 | Red | 2 hours |
|  | \＄1500－\＄1999 | Red | 3 hours |
|  | \＄2000－\＄2499 | Red | 4 hours |
|  | \＄2500 | Red | 5 hours |

## Sample 1

| 7 |  |
| :--- | :--- |
| 7 | $l$ |
| 300 |  |
| 0 | 25 | | 35 | 25 |
| :--- | :--- |
| 70 | 25 |
| 110 | 25 |
| 140 | 25 |
| 150 | 25 |
| 210 | 25 |

Time period when each Super Chat is visible：
Super Chat 1：0－110
Super Chat 2：35－140
Super Chat 3：70－150
Super Chat 4：110－210
Super Chat 5：140－260
Super Chat 6：150－270
Super Chat 7：210－330（The stream ended before the Super Chat expires）

## Sample 2

| 4 |  |
| :--- | :--- |
| 4000 |  |
| 0 | 500 |
| 1 | 250 |
| 2 | 100 |
| 3 | 100 |

Time period when each Super Chat is visible：
Super Chat 1：0－3，602－3600
Super Chat 2：1－1801
Super Chat 3：2－602
Super Chat 4：3－603

## S212－Super Chat

## Solutions

## S212－Super Chat

## Ideas

```
```

\#define MIN 60

```
```

\#define MIN 60
\#define HR 3600
\#define HR 3600
int getTime(int price) {
int getTime(int price) {
if (price <= 24) return 0;
if (price <= 24) return 0;
if (price <= 49) return 2 * MIN;
if (price <= 49) return 2 * MIN;
if (price <= 99) return 5 * MIN;
if (price <= 99) return 5 * MIN;
if (price <= 249) return 10 * MIN;
if (price <= 249) return 10 * MIN;
if (price <= 499) return 30 * MIN;
if (price <= 499) return 30 * MIN;
if (price <= 999) return 1 * HR;
if (price <= 999) return 1 * HR;
if (price <= 1499) return 2 * HR;
if (price <= 1499) return 2 * HR;
if (price <= 1999) return 3 * HR;
if (price <= 1999) return 3 * HR;
if (price <= 2499) return 4 * HR;
if (price <= 2499) return 4 * HR;
return 5 * HR;
return 5 * HR;
}

```
```

}

```
```

## Price is given instead of Pin duration

## Write a function to convert Price into Pin duration

| Price | Colour | Pin duration and notes |
| :--- | :--- | :--- |
| $\$ 5-\$ 9$ | Blue | 0 minutes．No chat message can be entered． |
| $\$ 10-\$ 24$ | Cyan | 0 minutes |
| $\$ 25-\$ 49$ | Green | 2 minutes |
| $\$ 50-\$ 99$ | Yellow | 5 minutes |
| $\$ 100-\$ 249$ | Orange | 10 minutes |
| $\$ 250-\$ 499$ | Magenta | 30 minutes |
| $\$ 500-\$ 999$ | Red | 1 hour |
| $\$ 1000-\$ 1499$ | Red | 2 hours |
| $\$ 1500-\$ 1999$ | Red | 3 hours |
| $\$ 2000-\$ 2499$ | Red | 4 hours |
| $\$ 2500$ | Red | 5 hours |

香港電腦奧林匹克競賽
Hong Kong Olympiad in Informatics

## S212－Super Chat

## Ideas

We can imagine Super Chats as Segments on a timeline Start from purchase time $T_{i}$ ，end at $T_{i}+\operatorname{getTime}\left(\mathbb{P}_{i}\right) / /$ Pin duration

| 4 |  |
| :--- | :--- |
| 4000 |  |
| 0 | 500 |
| 1 | 250 |
| 2 | 100 |
| 3 | 100 |$\quad$| 4 |
| :--- |

香港電腦奧林匹克競賽

## S212－Super Chat

## Ideas

The last 3 Super Chat among $\mathbf{N}$ chats will always be visible within their Pin duration
$(\mathrm{N}-2)^{\text {th }},(\mathrm{N}-1)^{\mathrm{th}}, \mathrm{N}^{\text {th }}$ Super Chat
No newer Super Chat can＂take＂their spot in the display section
Answer for them＝their Pin duration

How about $\mathbf{1}^{\text {st }}$ to $(\mathbf{N}-\mathbf{3})^{\text {th }}$ Super Chat？

香港電腦奧林匹克競賽
Hong Kong Olympiad in Informatics

## Subtask 1 （16 points）

$\mathbf{P i}=\mathbf{2 5}$ ，i．e．the pin duration of each and every Super Chat is $\mathbf{2}$ minutes．
$1 \leq N \leq 200000$
$N \leq K \leq 500000$

Pin duration（getTime（ $\left.\mathbf{P}_{\mathrm{i}}\right)$ ）is the same for every $\mathbf{i}$
If a superchat start earlier than another superchat，it ends earlier too $T_{i}<T_{j}=>T_{i}+\operatorname{getTime}\left(P_{i}\right)<T_{j}+\operatorname{getTime}\left(P_{j}\right)$

## S212－Super Chat

## Subtask 1 （16 points）

If a Super Chat become invisible，it won＇t become visible again
Other visible Super Chats are newer＝＞end Iater

If $\mathrm{i}^{\text {th }}$ Super Chat become invisible before its end time（overtaken by others SC），．．．．
Time $\qquad$ $\longrightarrow$

Case 2

## S212－Super Chat

## Subtask 1 （16 points）

If ${ }^{i t h}$ Super Chat become invisible before its end time
it must be overtaken by $(\mathbf{i}+3)^{\text {th }}$ Super Chat takes its spot

Compute the display time of $\mathbf{i}^{\mathbf{t h}}$ Super Chat by considering the difference between $\mathbf{i}^{\text {th }}$ and $(\mathbf{i}+3)^{\text {th }}$ Super Chat＇s purchase time

```
for (int i = 0; i < n; i++) {
    if (i + 3<n) {
        int diff = a[i + 3].t - a[i].t;
        printf("%d\n", min(diff, 120));
    }
    else printf("%d\n", 120);
}
```

Time Complexity： $\mathbf{O}(\mathbf{N})$

HhCe
香港電腦奧林匹克競賽
Hong Kong Olympiad in Informatics

## Subtask 2 （15 points）

$\mathbf{N}=4$
$4 \leq K \leq 20000$
If a Super Chat become invisible，it won＇t become visible again

4
4000
0500
1250
2100
3100

Time period when each Super Chat is visible：
Super Chat 1：0－3，602－3600
Super Chat 2：1－1801
Super Chat 3：2－602
Super Chat 4：3－603

HHC $\begin{aligned} & \text { 香港電腦奧林匹克競賽 }\end{aligned}$

## S212－Super Chat

## Subtask 2 （15 points）

$\mathrm{N}=4$
$(\mathbf{N}-2)^{\text {th }},(\mathbb{N}-1)^{\text {th }}, \mathbf{N}^{\text {th }}$ Super Chat will always be visible within their Pin duration How about the $1^{\text {st }}$ Super Chat？
$1^{\text {st }}$ Super Chat is visible for at most two separate time periods

香港電腦奧林匹克競賽
Hong Kong Olympiad in Informatics

## S212－Super Chat

## Subtask 2 （15 points）

Analyse carefully when $1^{\text {st }}$ Super Chat is visible
One way is to consider when $1^{\text {st }}$ Super Chat is blocked by $2^{\text {nd }}, 3^{\text {rd }}$ and $4^{\text {th }}$ Super Chats

Let the end time end ${ }_{i}$ of $\mathrm{i}^{\text {th }}$ Super Chat be $\mathbf{T}_{\mathbf{i}}+\operatorname{getTime}\left(\mathrm{P}_{\mathrm{i}}\right)$
$1^{\text {st }}$ Super Chat is possibly blocked between $\left[T_{4^{\prime}}, \min \left(\right.\right.$ end $_{2^{\prime}}$, end $_{3^{\prime}}$, end $\left.\left._{4}\right)\right]$

香港電腦奧林匹克競賽
Hong Kong Olympiad in Informatics

## Subtask 2 (15 points)

$1^{\text {st }}$ Super Chat is possibly blocked between [ $T_{4}, \min \left(\right.$ end $_{2^{\prime}}$ end $_{3^{\prime}}$ end $\left._{4}\right)$ ] = $[3,602]$

Display time of $1^{\text {st }}$ Super Chat

$$
\begin{aligned}
& =[0,3]+[602,3600] \\
& =3001
\end{aligned}
$$

Sample 2

## S212－Super Chat

## Subtask 2 （15 points）

Compute the display time of $1^{\text {st }}$ Super Chat carefully

Time Complexity $=\mathbf{O}(\mathbf{1})$

```
pair <int, int> forbid = make_pair(a[3].t, min({a[1].ed, a[2].ed, a[3].ed}));
if (forbid.first < forbid.second) {
    int totalTime = 0;
    totalTime += min(getTime(a[0].p), forbid.first - a[0].t);
    totalTime += max(0, a[0].ed - forbid.second);
    printf("%d\n", totalTime);
}
else printf("%d\n", getTime(a[0].p));
for (int i = 1; i < n; i++) printf("%d\n", getTime(a[i].p));
```

## Subtask 2 （15 points）

As $\mathbf{N}$ is small and $\mathbf{K} \leq \mathbf{2 0 0 0 0}$
Simulate the Super Chats for each second from $\mathbf{0}$ to $\mathbf{K} \mathbf{K + 1 7 9 9 9}$

Check from $\mathbf{4}^{\text {th }}$ Super Chat to $\mathbf{1}^{\text {st }}$ Super Chat（ $\mathbf{t}_{\mathbf{i}} \leq$ currentTime $\leq \mathbf{e d}_{\mathbf{i}}$ ）
Add one second to the top 3 latest active Super Chats at that moment
Break when found 3 active Super Chats

Time complexity＝ $\mathbf{O}(\mathbf{N K})$

HhCe

## Subtask 3 （18 points）

$1 \leq \mathrm{N} \leq 1000$
$N \leq K \leq 20000$
$\mathbf{N}$ is small and $\mathbf{K} \leq \mathbf{2 0 0 0 0}$ ，can use the previous solution
NK at most $2 \times 10^{7}$
$\mathbf{O}(\mathbf{N K})$ solution can pass within 1 second

香港電腦奧林匹克競賽
Hong Kong Olympiad in Informatics

## Subtask 3 （18 points）

## Simulate the Super Chats for each second from 0 to $\mathbb{K}$ K＋17999

Check from $\mathbf{N}^{\text {th }}$ Super Chat to $\mathbf{1}^{\text {st }}$ Super Chat（ $\mathrm{t}_{\mathbf{i}} \leq$ currentTime $\leq \mathbf{e d}_{\mathrm{i}}$ ）
Add one second to the top 3 latest active Super Chats at that moment
Break when found 3 active Super Chats

Time complexity $=\mathbf{O}(\mathbf{N K})$

HHCC
香港電腦奧林匹克競賽
Hong Kong Olympiad in Informatics

## Subtask 4 （27 points）

$1 \leq \mathrm{N} \leq 200000$
$N \leq K \leq 500000$
$\mathrm{NK} \approx 10^{11}$
$\mathbf{O}(\mathbf{N K})$ solution can＇t pass in 1 second

Let＇s try to improve the $\mathbf{O}(\mathbf{N K})$ solution！

HhCo

## Subtask 4 （27 points）

Currently we find top 3 latest active Super Chats by linear scan
Scan from $\mathbf{N}^{\text {th }}$ Super Chat to $1^{\text {st }}$ Super Chat
Each second takes $\mathbf{O}(\mathbf{N})$ to search those 3 Super Chats
Result in $\mathbf{O}(\mathbf{N K})$

If we can use less than $\mathbf{O}(\mathbf{N})$ to search for the top 3 Super Chats
We can achieve a better solution

香港電腦奧林匹克競賽
Hong Kong Olympiad in Informatics

## Subtask 4 （27 points）

Want to find the top 3 Super Chats at a moment quickly
We can maintain the lists of active Super Chats by stack
The stack will store the id of the active Super Chats

At the end of $\mathbf{i}^{\text {th }}$ second，if there is a new Super Chat，push the id of it into the stack
Super Chats are sorted in purchase time in the stack
The latest Super Chat is on the top of the stack

香港電腦奧林匹克競賽
Hong Kong Olympiad in Informatics

## Subtask 4 （27 points）

At the beginning of $\mathbf{i}^{\text {th }}$ second，we want to find the top 3 Super Chats
Scan from the top of stack to bottom
If the current super chat is not expired（end $\mathrm{x}_{\mathrm{x}} \mathrm{i}$ ），add one second to its answer
－$\quad$ Save it to some temp memory and push it back（the stack need to remain sorted）
else pop it out
If we already found 3 active Super Chats in the stack，break
Still O（NK）？

HhCe
香港電腦奧林匹克競賽
Hong Kong Olympiad in Informatics

## Subtask 4 （27 points）

Let＇s say in $\mathbf{i}^{\text {th }}$ second，we accessed $\mathbf{m}_{\mathbf{i}}$ elements in the stack $m_{i}-3$ of them are popped

We pushed $\mathbf{N}$ elements into the stack（ $\mathbf{N}$ Super Chats）
$\operatorname{Sum}\left(m_{i}-3\right) \leq N$
$\operatorname{Sum}\left(\mathrm{m}_{\mathrm{i}}\right)=\mathbf{O}(\mathrm{N})$

Time complexity $=\mathbf{O}(\mathbf{N K}) \mathbf{O}(\mathbf{N}+\mathrm{K})$

HhCe
香港電腦奧林匹克競賽
Hong Kong Olympiad in Informatics

## Full Solution

$1 \leq N \leq 200000$
$N \leq K \leq 10^{9}$
$K$ is too big that $\mathbf{O}(\mathbf{N}+\mathrm{K})$ solution can＇t pass in one second
Instead of simulating the super chats for each second
We can simulate the process in a smarter way

香港電腦奧林匹克競賽
Hong Kong Olympiad in Informatics

## S212－Super Chat

## Full Solution

If the current super chat is not expired（end ${ }_{x}<i$ ），add one second to its answer else pop it out（ end $_{x}=\mathrm{i}$ ）

If there is a new Super Chat $\left(T_{x}=i\right)$ ，push the id of it into the stack

When $\mathbf{i}=\mathbf{T}_{\mathbf{x}}$ or end $_{\mathbf{x}^{\prime}}$ the top 3 Super Chats may change else the top 3 Super Chats remain unchanged $\mathbf{i}=\mathbf{T}_{\mathbf{x}}$ or end $_{\mathrm{x}}=>$ there are 2 N important timestamp

## Full Solution

Instead of simulating the process for each second
Simulate the process for each important timestamps

Calculate the display time of top 3 Super Chats between important timestamps
－Instead of adding one second at a time

香港電腦奧林匹克競賽
Hong Kong Olympiad in Informatics

## Full Solution

Add all the important timestamps into an array
Store（time，id，type）for each timestamps
－type 0 ＝start of the Super Chat，type 1 ＝end of the Super Chat

## Sort it by ascending time

Process the important timestamps one by one

香港電腦奧林匹克競賽
Hong Kong Olympiad in Informatics

## Full Solution

At the beginning of $\mathbf{i}^{\text {th }}$ seond timestamp，we want to find the top 3 Super Chats
Scan from the top of stack to bottom
If the current super chat is not expired，add ene－send the difference between the current and previous timestamp to its answer
else pop it out
If we already found 3 active Super Chats in the stack，break

香港電腦奧林匹克競賽
Hong Kong Olympiad in Informatics

## S212－Super Chat

## Full Solution

## At the end of $\mathbf{i}^{\text {th }}$ timestamp

If it is a type $\mathbf{0}$ timestamp（start of a Super Chat），push the id of it into the stack
If it is a type $\mathbf{1}$ timestamp（end of a Super Chat），mark the Super Chat as expired

Time complexity $=\mathbf{O}(\mathbf{N} \operatorname{logN})$
－Bottleneck：sort

## S212－Super Chat

## Full Solution

```
for (int i = 0; i < event.size(); i++) {
    vector <int> updateId;
    while (updateId.size() < 3 && stk.size()) {
    if (removed[stk.top()]) stk.pop();
        else {
            updateId.push_back(stk.top());
            stk.pop();
        }
    }
    int addTime = event[i].t;
    if (i - 1 >= 0) addTime -= event[i - 1].t;
```

reverse（updateId．begin（），updateId．end（））；

```
    for (auto id : updateId) {
        stk.push(id);
        res[id] += addTime;
    }
    if (!event[i].type) stk.push(event[i].id);
    else removed[event[i].id] = 1;
```

\}

## S212－Super Chat

## Full Solution

You can also implement maintain the active Super Chats with std：：set

Easier implementation
Larger constant

## O（NlogN）

香港電腦奧林匹克競賽
Hong Kong Olympiad in Informatics

## Full Solution

Another way is to maintain the top 3 latest active SCs for each duration tier
－Instead of maintain every SCs in a single stack
There are 9 duration tier for SC（ignore 0 mins）
We can maintain the active SCs for each tier by queues

Unlike maintaining in stack，when a SC expires
It always locate in the front of the queue of its iter

| Price | Colour | Pin duration and notes |
| :--- | :--- | :--- |
| $\$ 5-\$ 9$ | Blue | 0 minutes．No chat message can be entered． |
| $\$ 10-\$ 24$ | Cyan | 0 minutes |
| $\$ 25-\$ 49$ | Green | 2 minutes |
| $\$ 50-\$ 99$ | Yellow | 5 minutes |
| $\$ 100-\$ 249$ | Orange | 10 minutes |
| $\$ 250-\$ 499$ | Magenta | 30 minutes |
| $\$ 500-\$ 999$ | Red | 1 hour |
| $\$ 1000-\$ 1499$ | Red | 2 hours |
| $\$ 1500-\$ 1999$ | Red | 3 hours |
| $\$ 2000-\$ 2499$ | Red | 4 hours |
| $\$ 2500$ | Red | 5 hours |

香港電腦奧林匹克競賽
Hong Kong Olympiad in Informatics

## Full Solution

We can remove a SC immediately when it expires
－In stack，we remove it lazily（remove when we face an expired SC）

If we want to find the top 3 latest SCs overall

## We only care about top 3 SCs in each duration tier

香港電腦奧林匹克競賽
Hong Kong Olympiad in Informatics

## Full Solution

Therefore，there are only $9 \times 3=27$ candidates
We want to find the top 3 candidates（by sorting／partitioning）and update their answers
－Top 3 largest id

Time complexity $=\mathbf{O}(\mathbf{N} \log \mathbf{N}+\mathbf{3 T} \log (3 \mathrm{~T})$ ）or $\mathbf{O}(\mathbf{N} \log \mathbf{N}+3 \mathbf{T})$
T ＝number of duration iters

香港電腦奧林匹克競賽
Hong Kong Olympiad in Informatics

## S212－Super Chat

## Full Solution

```
for (auto p : events) {
if (p.first != last_time) {
    int last_duration = p.first - last_time;
    last_time = p.first;
    vector<pair<int, int>> candidates;
    for (const auto& v : scs) {
        for (int i = max(0, int(v.size()) - 3); i < v.size(); i++) { }
            candidates.push_back(v[i]);
        }
    }
    sort(candidates.begin(), candidates.end());
```

## S212－Super Chat

# Any Questions？ 

Probably no．．．
